/lab host="bland"y B-cells from tonsils (cell line)"
/lab host="bland"y B-cells y Vector: poTB7; Site_1: XhoI;
Site_2: EcoRI; cDNA made by oligo-dT priming.
Directionally cloned into EcoRI/XhoI sites using the following 5' adaptor: GGCACGAG(G): Size-selected >500pf for average insert size 1.8kb. Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-CDNA synthesis kit (Stratagene) and Superscript II T (Life Technologies).
Note: this is a NIH_MGC Library."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                        The invention relates to a method of modulating insulin activity in mammalian cells by adminstering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site 1 of IR and an insulin agonist are useful for treating diabetes. Also, peptides that are useful for treating diabetes. Also, peptides that are useful for treating insulin-like growth factor-1 (IGF-1) receptor are useful for treating insulin-like growth factor (IGF) sensitive tumours (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful in screening for compounds that bind to IR or IGF-1 receptor, potential therapeutics and research reagents. ABK47246-ABK47277 represent IR and/or IGF-1 receptor DNA sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          672
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   552
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              729
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ATCACTTGCCGGGCGAGTCAGGGCATTAGCAATTATTTAGCCTGGTATCAGCAGAAACCA 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of modulating insulin activity in mammalian cells by administering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed from gene therapy vectors, that binds to Site 1 of IR and an insulin adonist are useful for treating diabetes. Also, peptides that are useful for treating diabetes. Also, peptides that are useful for treating insulin-like growth factor-1 (IGF)-sensitive tumours (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful is creening for compounds that bind to IR or IGF-1 receptor, potential therapeutics and research reagents. ABRA1246-ABKA1277 represent IR and/or IGF-1 receptor DNA sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      493 ATCACTTGCCGGGCGAGTCAGGGCATTAGCAATTATTTAGCCTGGTATCAGCAGAAACCA

                                                                                                                                                                                                                                                                                                                                                                                                       ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method of modulating insulin activity in receptor (IR). A composition containing a peptide, optionally expressed agonist are useful for treating diabetes. Also, peptides that are antagonist are useful for treating diabetes. Also, peptides that are antagonists of the insulin-like growth factor. I (IGF) sensitive tumours (e.g. & prostate and breast) and diabetic retinopathy, while IGF. receptor agonists are useful for treating insulin-like growth factor (IGF)-sensitive tumours (e.g. & prostate and breast) and diabetic retinopathy, while IGF. receptor agonists are useful for treating neurological diseases, including stroke and diabetic neuropathy. The peptides are also useful in screening for compounds that bind to IR or IGF-1 receptor, potential therapeutiqs and research reagents. ABK47246-ABK47277 represent IR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                               factor-alpha (TNF-alpha) antibody (Ab) light chain variable region.

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro is 1929 assay with an ICSO of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid arthritis, spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diseases, malagnancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coaquiation disturbances, burns, reperfusion injury, Reloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The below of inhibits TNF-alpha induced expression of endothelial cell invocate abbesich was made of endothelial cell invocate abbasic of inhibits TNF-alpha induced expression of endothelial cell

transgenic animal, comprising a numanised immunoglobulin prelates to a numanised immunoglobulin dearlyed invention relates to a numanised immunoglobulin of a human immunoglobulin colypeptide sequence (e.g. form immunoglubulin Cgamma, Ckappa or clambda2). Also included area 1) nucleic acid molecules comprising the clambda2). Also included area 1) nucleic acid molecules comprising the creation of rabbit Cgamma, the 3' flanking the creation of rabbit Cgamma, the 3' flanking regions of cow, sheep and rabbit Cgamma, the 3' flanking region of rabbit Cgamma, cc 2) a recombination vector for replacing an If gene segment from a non-human animal with a human immunoglobulin (Ig) gene segment, cc comprising from 5' to 3', a 5' nucleotide sequence, the human ig gene segment, and a 3' nucleotide sequence, where the 5' and 3' nucleotide sequence, or a nucleotide sequence, or a sequence, or an unimal sequence of the gene sequence, and the locus or sequences of the gene sequence of the gene sequence of the gene sequence of the gene sequence or an autoimmune disease in the non-human animal and 3) a transgenic or an autoimmune disease in the non-human animal and 3) a transgenic or an autoimmune disease in contaminal and and producing a the construct into a recipient cell or non-human animal and an introducing the construct into a recipient cell or a non-human animal and an impaired expression of endogenous Ig molecules, and the recipient cell is a fertilised egg. Humanised antibodient cell is a setul fer recipient cell is a setulised egg. Alternat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      offepring is selected which produces both humanised heavy and light chains. The Cgamma DNA is useful for creating a humanised Ig locus and making transgenic animals capable of producing humanised Ig molecules. The present sequence is a recombination vector of invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel humanised antibodies useful for treating diseases caused bacterial, viral, fungal infection and cancer, are derived from transgenic non-human animals engineered to contain humanised

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAAGATGTTGCAACTTATTACTGTCAAAAGTATAACAGTGCCCCTCCGAGTACGTTCGGC 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, pancreatic tumour protein; pancreatic cancer; therapy; diagnosis; cancer; vaccine; cytostatic; ss.
corresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise antibodies, and to screen for peptide analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to polynucleotides derived from pancreatic tumour cDNA library, encoding pancreatic tumour proteins. The invention also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides derived from pancreatic tumor cDNA library, useful as vaccines for preventing and treating pancreatic cancer, as well as for the diagnosis and monitoring of such cancers -

The invention provides a neuromodulatory agent (I) capable of promoting neurite outgrowth, regeneration, remyelination and neuroprotection in central nervous system (CNS). (I) is capable of inducing remyelination, promoting cellular proliferation of glial cells, and promoting Ca2+ signaling with oligodendrocytes. An humanised antibody to (I) can be selected from antibody sHIGMSZ (LMW 22), ebvHigh Ms11910, ebv High CG2268, AKMR4, CB31B12, CB21E7 or MS119E5. (I) is useful for stimulating cremyelination of CNS axons, or treating demyelinating proliferation of glial cells in CNS axons, or treating demyelinating disease of CNS in a mammal in need of such therapy. (I) is capable of binding to structures and cells within CNS. (I) is preferably useful for treating a demyelinating disease of CNS of a mouse infected with Strain DA of Theller's mutine encephalomyelitis (TMEV) or for treating a human being having multiple sclerosis, or a chuman or domestic animal with a viral demyelinating disease of CNS. (I) is also useful for simulating remyelination of CNS axons. The stimulating the proliferation of glial cells from mixed cell culture. (I) is also useful for stimulating remyelination of CNS axons. The antibodies are useful for preventing infection by a bacterium, virus or like pathogen that causes demyelination or other neurodegenerative condition in a subject. Methods where (I) is administered to a patient are useful for treating multiple sclerosis, parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Arcactrocogocoagreagocarrageaarrarragecrograreagoaaaacea 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a human anti-tumour antigen monoclonal antibody (MAD) light chain variable region, useful medicine, pharmacology and biochemistry. The isotype of a MAD secreted by the human/human hybridoma HT was determined to be and kappa. Human MAD was purified, and the antigen recognised human MAD was purified, and the antigen recognised human MAD cLN*_ISM identified by western blocting.

It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for diagnosing and treating many diseases, including cancer, immune system disorders (such as inflammation, AIDS, allergies, anemia, arterioscierosis, asthma, atheroscierosis, cholecystitis, Crohn's disease, diabetes mellitus, emphysema, Graves' disease, hepatitis, multiple sclerosis, psoriasis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus and ulcerative collitis), complications of cancer, haemodialysis and extracorporaal circulation, trauma and haematopoietic cancer (such as leukaemia) and infections caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Immunoglobulin superfamily proteins, the agonist and antagonist of the protein is useful for preventing and treating disorders associated with altered levels of the protein such as cancer, immune system disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes a method for screening for functional polypeptides which bind a ligand. The method comprises contacting a repertorie of polypeptides with a generic ligand, and then screening selected functional polypeptides with a target ligand. The method permits the removal from a chosen repertorie of polypeptides, those which are non-functional, e.g. as a result of the introduction of frame-shift mutations, stop codons, folding mutants or expression mutants which would be or are incapable of binding to any target ligand. The method also permits the enrichment of a chosen repertoire of polypeptides for those polypeptides which are functional, well folded and highly expressed. The polypeptides which are functional, well folded diagnostic, prophylactic and therapeutic procedures. The present sequence encodes the single chain antibody (ScFv) that forms the basis of a library according to the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel humanized anti-Fas antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral,
                                                                                                                                                                                                                                  457 ATCACTIGCCGGGCAAGICAGAGCATIAGCAGCIATITAAATIGGTAICAGCAGAAACCA

Immunoautiacty, dermatological, immunoauppessive, chyronimetic, antitrheumatic, nephrotropic, antiinfertility, neuroprotective, chimbibit of ligand binding to cell surface Fas or inhibit it by competitive inhibit and binding to cell grades associated with the Fas/Fas ligand system, capecially systemic lupus erythematosus, Hashimoto disease, pernicious or hypoplastic versus host disease, Slorgen's syndrome, pernicious or hypoplastic camemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin capented in allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminat, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells used murine fas, so can be evaluated in continuing a human anti-murine antibody response. This sequence represents inducing a human anti-murine antibody response. This sequence represents a human immunoalpolulin light chain kappa variable region subgroup type I which is used in the construction of humanised anti-Fas antibody constructs described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               132

                                                                                                                                                                                                                                                                                                                                                                                   ò
```

The invention relates to a preventive or treating agent for diseases caused by a bnormality in Fas/Fas ligand system containing as the active component an antibody having as the light chain subunit a polypeptide containing residues 1-218 of one of 3, 239 residue amino acid sequences, or residues 1-451 of one of 3, 470 residue amino acid sequences, dully defined in the specification and having an activity of combining specifically with mammalian Fas and an activity of induring appropriation a cell expressing Fas. The agent has immunosuppressive and alseases, allergy, alopy and is used for preventing and treating autoimmune pCR primer, useful to the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1, Application US/09968561A

Sequence 1, Application US/09968561A

Patent No. US20020164642A1

GENERAL INFORMATION:
APPLICANT: Tomilnson, Ian M

APPLICANT: Winner, Gregory

TITLE OF INVENTION: Method to Screen Phage Display Libraries with Different Ligands

FILER REFERENCE: 8039/1073B

CURRENT APPLICATION NUMBER: US/09/968,561A

PRIOR APPLICATION NUMBER: US 60/065,248

PRIOR APPLICATION NUMBER: US 60/066,729

PRIOR PILING DATE: 1997-11-21

PRIOR PELING DATE: 1997-11-21

PRIOR PELING DATE: 1998-10-20

PRIOR PELING DATE: 1998-10-20

PRIOR PELING DATE: 1998-10-20

PRIOR SED IN OND ATE: 1998-10-20

PRIOR APPLICATION NUMBER: US 60/066,729

PRIOR PELING DATE: 1998-10-20

SOFTWARE OF SEC ID NOS: 350

SOFTWARE: PatentIn Version 3.1

LENGTH: 720

Patent No. 6255455
GENERAL INFORMATION
FORMATION
FOR APPLICANT: Siegel, Donald L.
TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF
FILE REFERENCE: 09596-420.
CURRENT APPLICATION NUMBER: US/09/240,274
CURRENT FILING DATE: 1999-01-29
EARLIER APPLICATION NUMBER: 60/081,380
EARLIER APPLICATION NUMBER: 60/081,380
EARLIER APPLICATION NUMBER: 60/081,500
EARLIER FILING DATE: 1996-01-10
EARLIER FILING DATE: 1996-10-11
